DETAILED ACTION

Election of Group I, claims 1-6 is acknowledged.

Claims 4-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As to claim 4, "said third part" (line 26) lacks antecedent basis.

As to claim 5, "the cylinders" (line 31) lack antecedent basis. Is this claim limited to more than one cylinder?

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Keegan.

Keegan '734 teaches (Figure 3) a pipette, including: channel block 11 having a cylindrical passage extending there through; a rod 14 passing into the passage; a cylinder (element 60a) that passes into the cylindrical passage from the end opposite the end into which the rod passes; a chamber defined by the block, rod and cylinder, having a variable volume, with a portion of the chamber being variable by relative movement of the block relative to a relatively stationary cylinder and rod (which occurs when the piston 41a contacts the cylinder 60a (See "moves into contact" on col. 7, line 56), resulting in the cylinder moving relative to the contacting (i.e. relatively fixed) rod/cylinder positions), and with a second portion of the chamber being variable by

relative movement of the cylinder relative to stationary block and rod (which occurs when the cylinder is inserted into a stationary block upon assembly of the unit).

As to claim 2, the chamber volume varies as a hand grasps the block 11, and a human operator depresses button 3.

As to claim 3, the piston 41a may be deemed to be a rod, and that piston diameter is greater than that of the cylinder 60a.

As to claim 4, note that either (1) the diameter of rod 14aa is less than that of the internal diameter of the channel, or (2) that the O-ring 43a suggests that the diameter of the piston 41a (or rod, if you will) is less than the internal diameter of the channel.

As to claims 5,6, note the extension member 12a that includes a passage, the member attached to an end of the cylinder at one end, and connected to a tip 55 at the other end.
